

Founder experience:

In a few sentences, highlight your most relevant professional, startup, or industry experience. Focus on track record, domain expertise, and past wins.

I have ~20 years of experience as a software engineer, building and scaling systems across enterprise and startup environments, with deep expertise in distributed systems, data pipelines, and full-stack development. I've built and shipped multiple production-grade products end-to-end—including live iOS apps (current: TagScribe) and a web publishing platform (www.publish-desk.com)—while independently owning architecture, infrastructure, and user experience.

I also hold a published patent (Smart Restaurant powered by Cloud-Native IoT AIOS, US 2024/0273653 A1, Aug. 15, 2024) and have presented at ISSRDC 2023 on quantum computing and sustainable quantum dot synthesis.

Tell us more about the team *

How does the team know each other? Is there anyone else on the team? Why is this the best team to win? Do you have any key advisors? Etc

I'm a solo founder.

I bring ~20 years of experience as a software engineer across enterprise and startup environments, with deep expertise in distributed systems, data pipelines, AI systems, and full-stack development. I've repeatedly taken products from idea to production independently—owning architecture, infrastructure, and user experience—which allows me to move fast without operational drag.

I'm also operating at the intersection of systems engineering and scientific modeling, combining AI/ML with information-theoretic approaches to biological systems. This is a technically demanding space that benefits from strong first-principles thinking and the ability to build both the research layer and the product stack end-to-end—something I've already demonstrated through shipped products and a published patent.

At this stage, being solo is an advantage: rapid iteration, clear vision, and tight execution. As the product and research mature, I plan to bring in domain experts and collaborators, but right now speed and depth of execution are the priority—and that's where I'm strongest.

Startup Name *

Bubbles & cafe Inc (soon will be renamed as 'Decision Biology')

Pitch your startup in one sentence. *

What do you do and for whom? E.g. "AI-powered therapist for Gen Z"

AI for Biological Decision Systems

Startup Description *

What problem are you solving? What are you building?

We're building **Decision Biology**—an AI system for modeling how cells process information and make decisions under uncertainty.

Today, biology is largely observational and fragmented. Cells respond to signals through complex, noisy pathways, but we lack a framework to quantify how information flows through these systems or to reliably predict outcomes. This makes drug development, disease modeling, and synthetic biology slow, expensive, and trial-and-error driven.

Decision Biology treats cells as information-processing systems. We model signaling pathways using information theory and probabilistic AI to simulate how signals are encoded, transmitted, and acted upon inside cells. This allows us to quantify information flow, predict cellular responses, and design interventions—turning biology from a descriptive science into a predictive and programmable engineering discipline.

We're building **Decision Biology**—an AI system that models how cells process information and make decisions under uncertainty.

Biology today is largely observational and hard to predict due to noisy, complex signaling pathways. We apply information theory and probabilistic AI to model these pathways, quantify information flow, and simulate cellular responses—turning biology into a predictive and programmable system.

For your startup (**Decision Biology**), the strongest positioning is:

- **Primary Category: Deep Tech**
- **Secondary Category (optional): Healthcare**

Why this works:

- It's fundamentally a **new scientific + AI paradigm** → clearly Deep Tech
- Direct applications in **drug discovery, biology, therapeutics** → Healthcare

This combination signals **high technical depth + real-world impact**, which is exactly what YC looks for in frontier ideas.
